The Beginner's  
Guide to What Is  
**DataSet  
Search**

Google has launched a new type of **Search engine** for data people.

They launched the service on September 5, 2018.

Dataset search is  
designed to help people  
find **data easier.**

Dataset Search

Search for Data Sets

Try [boston education data](#) or [weather site.noaa.gov](#)

[Find out more about including your datasets in Dataset Search.](#)

SWIPE

04

It's a free tool for  
searching **25 million**  
publicly available dataset.

Google BigQuery

+

Google Cloud

**Public Datasets**

SWIPE

The results you get are from **publishers' sites, digital libraries and authors' personal web pages.**

The screenshot shows a Google search for "digital libraries". The search bar is at the top with the text "digital libraries" and a magnifying glass icon. Below the search bar are several filters: "Last updated", "Download format", "Usage rights", "Topic", "Free", and "Saved data sets". The search results are displayed below the filters, showing "100+ data sets found". The first result is from NASA, titled "A Search method for Scientific Data in Digital Libraries, Phase I", with the URL "data.nasa.gov". It is an "application/rdf+xml" file, updated on Jun 26, 2018. The second result is from Statista, titled "Number of academic resources in the Saudi Digital Library in...", with the URL "www.statista.com". It is a "json, txt, csv, application/rss+xml, application/rdf+xml, xml" file, updated on Jun 26, 2018. A blue button labeled "Explore at Rally - Open Data Portal" is visible next to the NASA result.
